Topic: The overarching topic is to learn methods to analyze current and past vegetation, and how to combine the ecological and climatological information of present and past vegetation by applying various methods.

Preliminary schedule: Introductory seminar with lessons from teachers, block course on microscopic analyses of plant material (probably 2-3 days in May 22), field work for data collection, statistical analyses of data.

Workload: Participation in field campaigns, laboratory work, research report

Dates: to be announced in the preliminary meeting
